Question :

The Librarian's Dashboard Scenario The library is now digital! The head librarian needs a report to see which members are active and which books are in the collection. You also need to handle a "Book Donation" process where a new book is added and assigned to a category at the exact same time—if one part fails, the whole process must stop to keep the catalog accurate.

Task to be Done

1. **The Catalog Search (JOINS):** Create a third table called Loans that connects member_id to book_id. Write a query to show the Member Name and the Book Title they have currently borrowed.
2. **Collection Stats (Aggregations):** Write a query to find the total number of books published in each year. o Hint: Use COUNT(book_id) and GROUP BY published_year.
3. **The Donation Transaction (ACID):** Use a Transaction (BEGIN...COMMIT) to add a new book to the Books table and simultaneously log the entry in a Donation_History table.
4. **Search Speed (Indexing):** Create an Index on the isbn column. Explain why searching by ISBN is now faster for the librarian than searching by Title. Skill Set Gained • Relational Logic: Connecting independent tables (Books + Members) through a Junction table (Loans). • Analytical SQL: Using GROUP BY to generate business insights. • Atomic Operations: Using Transactions to ensure multiple database changes succeed or fail as a single unit.

Step 1 — Create Database

```
1  -- Step 1: Create Database
2  • CREATE DATABASE Donate_db;
3  • USE Donate_db;
4
```

Output

#	Time	Action	Message
✓ 1	14:03:39	CREATE DATABASE Donate_db	1 row(s) affected
✓ 2	14:03:41	USE Donate_db	0 row(s) affected

Step 2 — Create Books Table (DDL + Constraints)

```
1  -- Step 1: Create Database
2  • CREATE DATABASE Donation_db;
3  • USE Donation_db;
4  -- Step 2: Create Books Table
5  • CREATE TABLE Books(
6      book_id INT PRIMARY KEY,
